Instructions

Class Activity – Challenge (Guestbook)

This is an individual assignment. However, you are allowed and encouraged to discuss the ideas with your group members.

Task:

Fix a broken Guestbook app so users can:

1. Add their name + message.
2. See messages listed with time and author.
3. Use a cookie to remember their name.
4. Track how many entries they've added this session.

Submission:

Please submit your report only. Your report should specify the following:

1. Problem Overview

- a) Brief description of what was wrong in the provided Guestbook app.
- b) The required user features (in your own words)

2. Implementation Summary (After Fix)

Organize this section by the 4 requirements. For each requirement, include:

A. Add name + message

- UI description (inputs, button, validation rules)
- What happens on submit (request/handler logic)
- Validation and error handling:
 - empty name/message
 - overly long inputs (and your chosen limits)
- Screenshot demonstrating your results

B. List messages with time + author

- Message data model you used (fields and types)

- How messages are stored (in-memory / file / database - whatever the starter app uses)
- Sorting order (newest first or oldest first) and why
- Time formatting (example output) and time zone assumption
- Screenshot showing multiple messages displayed correctly

C. Cookie to remember the user's name

- Cookie name and what value it stores
- When the cookie is set/updated (first submit? on name change?)
- Expiry policy (session cookie vs persistent days) and justification
- How the UI uses it (auto-fill name field? greeting?)
- Screenshot evidence:
 - first submit sets cookie
 - refresh page shows name remembered

D. Track how many entries added this session

- Define “session” (browser session vs server session)
- Where you store the counter (server session / client sessionStorage / etc.)
- When it increments (only on successful posts)
- What happens on refresh, new tab, new browser, incognito (explain expected behavior)
- Screenshot showing the counter increasing

Due on Jun 10, 2026 11:59 PM

Available on May 28, 2026 12:01 AM. Access restricted before availability starts.

Available until Jun 11, 2026 11:59 PM. Access restricted after availability ends.
